IN THIS ISSUE
Highlighted research articles..............................vi

NEWS IN BRIEF
Important news stories affecting the community..................97

NEWS IN DEPTH
Q&A: Tom Curran on Translational Research ........... 99
Finding New Uses for Existing Medications ..............100
Cancer Centers Work to Optimize Pipelines ..........101

RESEARCH WATCH
Selected highlights of recent articles of exceptional significance from the cancer literature...........102

ONLINE

IN THE SPOTLIGHT
Another LAP in the Race........ 107
S.M. Lee and C. Yee
Commentary on Sun et al., p. 122

New Lung Cancer Susceptibility Locus Identified: Significance and Implications for Other Genome-Wide Association Studies ..........110
T.A. Sellers and Y.A. Chen
Commentary on Shi et al., p. 131

Regulating the TRAIL of Destruction: How A20 Protects Gibioblastomas from TRAIL-Mediated Death ..........112
I. Verbrugge and R.W. Johnstone
Commentary on Bellail et al., p. 140

New Roles Opined for OPCML.....................115
S.Y. Wu and A.K. Sood
Commentary on McKie et al., p. 156

Prospective
Cancers of the Colon and Rectum: Identical or Fraternal Twins?.............117
T.S. Hong, J.W. Clark, and K.M. Haigis

RESEARCH BRIEFS
Identification of Human Regulatory T Cells in the Setting of T-Cell Activation and Anti–CTLA-4 Immunotherapy on the Basis of Expression of Latency-Associated Peptide .....122
J. Sun, D.N. Tong, T. Fu, and P. Sharma
Précis: Latency-associated peptide is an accurate surrogate marker of regulatory T cells that will facilitate functional studies of immunotherapy.

Inherited Variation at Chromosome 12p13.33, Including RAD52, Influences the Risk of Squamous Cell Lung Carcinoma ..........131
Précis: A pathway-based analysis of a genome-wide association study identifies a squamous cell lung carcinoma susceptibility locus harboring the RAD52 gene.
Précis: Overexpression of the ubiquitin ligase A20 is a mechanism of resistance to TRAIL pathway–targeted therapy in glioblastoma.

The OPCML Tumor Suppressor Functions as a Cell Surface Repressor–Adaptor, Negatively Regulating Receptor Tyrosine Kinases in Epithelial Ovarian Cancer

Précis: OPCML binds the extracellular domains of specific receptor tyrosine kinases to induce their endocytic internalization and proteasomal degradation.

Essential Gene Profiles in Breast, Pancreatic, and Ovarian Cancer Cells

Précis: Analysis of a large-scale shRNA dropout screen with a new scoring metric facilitates the identification of essential genes and putative oncogenic drivers.

Correction

Correction: An LXR Agonist Promotes Glioblastoma Cell Death through Inhibition of an EGFR/AKT/SREBP-1/LDLR-Dependent Pathway
