IN THE SPOTLIGHT

A Spotlight from Prostate Cancer .................. 301

H.R. Herschman and J. Czernin

Commentary on Ulmet rt al., p. 320

Cancer Cell Metabolism: There Is No ROS for the Weary .................. 304

C.V. Dang

Commentary on Ros et al., p. 328

RESEARCH ARTICLES

The Role of the PGE₂–Aromatase Pathway in Obesity-Associated Breast Inflammation .......... 308

D. Wang and R.N. DuBois

Commentary on Subbaramaiah et al., p. 356

REVIEW

Negative Feedback and Adaptive Resistance to the Targeted Therapy of Cancer ... 311

S. Chandraipapty

Imaging Androgen Receptor Signaling with a Radiotracer Targeting Free Prostate-Specific Antigen ....... 320

Précis: A PSA-targeted radiotracer specifically localizes to prostate tumors and bone metastases and quantifies responses to antiandrogen therapy.

FUNCTIONAL METABOLIC

Screen Identifies 6-Phosphofructo-2-Kinase/ Fructose-2,6-Biphosphatase 4 as an Important Regulator of Prostate Cancer Cell Survival ................. 328

S. Ros, C.R. Santos, S. Maco, F. Baenke, G. Kelly, M. Howell, N. Zamboni, and A. Schulze

Précis: PFKFB4 regulates the balance between glycolysis and the pentose phosphate pathway to maintain redox homeostasis in prostate cancer cells.
Metformin Accelerates the Growth of BRAFV600E-Driven Melanoma by Upregulating VEGF-A 344  
Précis: Metformin promotes BRAF-mutant melanoma growth via VEGF-A induction, but synergizes with VEGF inhibitors to suppress tumor growth.

Increased Levels of COX-2 and Prostaglandin E2 Contribute to Elevated Aromatase Expression in Inflamed Breast Tissue of Obese Women 356  
Précis: Obesity-related breast inflammation increases aromatase activity and may therefore underlie an increased risk of hormone receptor-positive breast cancer.

Telomeric Allelic Imbalance Indicates Defective DNA Repair and Sensitivity to DNA-Damaging Agents 366  
Précis: Increased allelic imbalance extending to the telomeres predicts response to platinum-based chemotherapy and may identify patients with defective DNA repair.

Correction  
Correction: Genomic Complexity and AKT Dependence in Serous Ovarian Cancer 376

ON THE COVER  
Ulmet and colleagues developed 89Zr-5A10, a radiolabeled monoclonal antibody that targets tumor-associated “free” prostate-specific antigen (PSA). The 89Zr-5A10 radiotracer selectively and noninvasively detected and visualized prostate cancer xenografts and bone lesions, and could quantitatively measure changes in PSA production in response to antiandrogen therapy. These findings have implications for the clinical assessment of advanced prostate cancer and the evaluation of experimental therapies. For details, please see the article by Ulmet and colleagues on page 320.
