VIEWS

In The Spotlight

Addressing the Controversy: Do Bisphosphonates Directly Affect Primary Tumors? ........ 14

J.A. Sterling

See article, p. 35

The Microsatellite Instable Subset of Colorectal Cancer Is a Particularly Good Candidate for Checkpoint Blockade Immunotherapy ......................... 16

Y. Xiao and G.J. Freeman

See article, p. 43

Turning Telomerase into a Jekyll and Hyde Case? ........ 19

R.J. Wellinger

See article, p. 82

In Focus

How Does Multistep Tumorigenesis Really Proceed? ........ 22

C.L. Chaffer and R.A. Weinberg

MINI REVIEW

TRKing Down an Old Oncogene in a New Era of Targeted Therapy ........ 25

A. Vaishnavi, A.T. Le, and R.C. Doebele

RESEARCH BRIEFS

Real-Time Intravital Imaging Establishes Tumor-Associated Macrophages as the Extraskeletal Target of Bisphosphonate Action in Cancer ..................... 35

Précis: Bisphosphonates bind granular microcalcifications and are internalized by tumor-associated macrophages in breast tumors.

See commentary, p. 14

The Vigorous Immune Microenvironment of Microsatellite Instable Colon Cancer Is Balanced by Multiple Counter-Inhibitory Checkpoints ......................... 43

Précis: Mismatch repair–deficient colorectal cancers counteract Th1/CTL immune responses by upregulating immune checkpoint proteins, including PD-1 and PD-L1.

See commentary, p. 16

Mutant KRAS–Induced Expression of ICAM-1 in Pancreatic Acinar Cells Causes Attraction of Macrophages to Expedite the Formation of Precancerous Lesions ........ 52

Précis: Crosstalk between pancreatic acinar cells and proinflammatory macrophages promotes initiation of acinar-to-ductal metaplasia via KRASG12D–induced expression of the macrophage chemoattractant ICAM1.
Prospective Blinded Study of \( \text{BRAF}^{V600E} \) Mutation Detection in Cell-Free DNA of Patients with Systemic Histiocytic Disorders

Précis: Cell-free DNA testing using plasma and urine samples may be a reliable, noninvasive method to identify mutations and monitor treatment response in histiocytic disorders.

Measuring Residual Estrogen Receptor Availability during Fulvestrant Therapy in Patients with Metastatic Breast Cancer

M. van Kruchten, E.G. de Vries, A.W. Glaudemans, M.C. van Lanschot, M. van Faassen, I.P. Kema, M. Brown, C.P. Schröder, E.F. de Vries, and G.A. Hospers

Précis: Decreased [\(^{18}\text{F}\)]fluoroestradiol uptake visualized by PET/CT provides a measure of tumor ER availability and correlates with fulvestrant treatment outcome in patients with metastatic breast cancer.

Induction of Telomere Dysfunction Mediated by the Telomerase Substrate Precursor 6-Thio-2'-Deoxyguanosine

I. Mender, S. Gryaznov, Z.G. Dikmen, W.E. Wright, and J.W. Shay

Précis: 6-thio-2'-deoxyguanosine is a precursor of a telomerase substrate that is incorporated into newly synthesized telomeres, leading to telomere dysfunction and death in telomerase-expressing cells.

See commentary, p. 19
