Supplementary Figure 5. Non-specific negative effect of DMSO on the GVT activity of T-cells. Lethally irradiated BALB/c recipients were transplanted with C57BL/6 TCD BM cells with $0.5 \times 10^6$ C57BL/6 WT T-cells after 24 hours of pre-treatment with or without DMSO. On day 0, HSCT recipients were challenged with $0.25 \times 10^6$ luciferase-expressing A20-TGL tumor cells. Data are combined from two independent experiments ($n = 8–10$). Survival curve and the causes of deaths are shown.
