## IN THIS ISSUE
Highlighted research articles .......................... 477

## NEWS IN BRIEF
Important news stories affecting the community .......... 480

## NEWS IN DEPTH
Q&A: Antoni Ribas on Progress in Melanoma .......... 483
Cancer Immunotherapy: Make Way for CAR NK .......... 484

## RESEARCH WATCH
Selected highlights of recent articles of exceptional significance from the cancer literature ............. 485

## ONLINE

## VIEWS
**In The Spotlight**
Letting the GENIE Out of Its Bottle: Examining the Potential of Real-World Clinico... 490
E. Castellanos and S.S. Baxi
*See article, p. 526*

Not So FAST: Tumor Cells Resisting Death Drive CAR T-cell Dysfunction .......... 492
M.R. Green and S.S. Neelapu
*See article, p. 552*

Deconstructing Pancreatic Adenocarcinoma by Targeting the Conductor, MYC .......... 495
I.A. English and R.C. Sears
*See article, p. 588*

## MINI REVIEW
Advances in Targeting RET-Dependent Cancers ....... 498
V. Subbiah and G.J. Cote

## REVIEW
Advances in the Treatment of Acute Myeloid Leukemia: New Drugs and New Challenges ................. 506
N.J. Short, M. Konopleva, T.M. Kadia, G. Borthakur, F. Ravandi, C.D. Dinardo, and N. Dave

## RESEARCH ARTICLES
Characteristics and Outcome of AKT1 E17K-Mutant Breast Cancer Defined through AACR Project GENIE, a Clinico... 526
*Précis: Data from AACR Project GENIE were used to investigate the effects of the rare AKT1 E17K mutation in ER+ breast cancer, showing the challenges and advantages of using this type of real-world evidence.*
*See commentary, p. 490*

Monocytic Subclones Confer Resistance to Venetoclax-Based Therapy in Patients with Acute Myeloid Leukemia ........... 536
*Précis: Compared with less differentiated acute myeloid leukemia (AML), monocytic AML is more resistant to venetoclax-based therapy, a phenomenon that may be attributable to dedifferentiation of preexisting monocytic subclones.*
Impaired Death Receptor Signaling in Leukemia Causes Antigen-Independent Resistance by Inducing CAR T-cell Dysfunction ............... 552
Précis: Response to CD19-directed CAR T cells in acute lymphoblastic leukemia was dependent on death receptor signaling, and exposure to ALL cells with impaired death receptor signaling caused CAR T cells to adopt an exhausted-like phenotype. See commentary, p. 492

Relapse-Fated Latent Diagnosis Subclones in Acute B Lineage Leukemia Are Drug Tolerant and Possess Distinct Metabolic Programs ............... 568
Précis: Minor subclones that are present at the time of diagnosis in B-progenitor acute lymphoblastic leukemia can cause relapse and exhibit distinct traits, including chemotherapy resistance, prior to treatment.

MYC Instructs and Maintains Pancreatic Adenocarcinoma Phenotype ............... 588
Précis: In a mouse model of mutant Kras-driven pancreatic ductal adenocarcinoma (PDAC), Myc activation was required for progression to PDAC, whereas Myc deactivation caused rapid regression of even established PDACs.
See commentary, p. 495

Oncogenic KRAS-Driven Metabolic Reprogramming in Pancreatic Cancer Cells Utilizes Cytokines from the Tumor Microenvironment ............... 608
Précis: In models of mutant Kras-driven pancreatic cancer, T2 cells in the tumor microenvironment produced the cytokines IL4 and IL13, which promoted metabolic reprogramming and tumorigenesis.
